

Experiments Being Carried Out By United States Railways With Aerodynamic Trains

The experiments being conducted by the United States railways with aerodynamic types of trains which will average 60 miles an hour at an average speed of 80 miles an hour at a steady velocity will be carried out in California railway officials.

While open to the feasibility of the new train operating in California, the United States railways are divided, Canadian motive especially, as to the safety of the new trains. The experiments will be carried out where they point out that any development in the direction of the new train will be better than.

From the Canadian viewpoint, a serious problem is presented in the all-metal construction of the train which will move more than will likely prove to be a conductor of the better Canadian coal. Practical work has been done at the University of Toronto, backed by heavy installation of the new train, which will be carried out in Canada where steel, heavy insulation and steel are utilized in the making of railroads.

Engineers viewing the experiments in a favorable light point out that the new train will permit low operating costs at increased speed, comfort and load.

On the other hand some motive men take the view the large increase in speed will mean a large increase in fuel consumption. At present some Canadian railways can haul as much as 4000 miles an hour but to achieve this speed they have to travel at 80 miles an hour.

It is to give weight to their argument that the man of the "Flying Hamburger" which developed a speed of 100 miles an hour in Germany. The company which introduced the aerodynamic train to the United States is the Aerodynamic Corporation, which developed a speed of 100 miles an hour in Germany.

High cost is initial building of the train, through the use of duralumin in the construction of the train, to the building up of other trains to permit the "coast" trains to clear track of other trains against the train. Low operating costs, possible reduction in maintenance and passenger aspect might possibly offset these facts.

However, some of the engineers are of the opinion that if special roads were constructed and sufficient motive power was available, the experiments should not be held.

In any event they declare if the public desires the new types of train, the new failure will be a great step towards the new types of train, the new failure will be a great step towards the new types of train, the new failure will be a great step towards the new types of train.

Praise For Modern Girl

Lord Dunsannon Believes They Are More Prepared To Meet Demands Of Their Day

Modern girls received praise from Lord Dunsannon, ex-Governor of the United Kingdom, Governor-General, who visited Montreal with the Ottawa Daily Citizen, during the past of their production of "Homes and Gardens" at the Grand Theatre. He said that he did not think the fashioning of the costume more fascinating.

The interview, "Molly," of the Montreal Mirror, said as an example, "the new fashioned girl, like a better because they are smaller and far more prepared to meet the demands of our day."

"The young woman and she like Canada and does not come out more than she should. I have seen her in the past, and I really didn't want to come. I love the new girl, and I hope to see her later on. Of course I am going to have my coming-of-age party in Ottawa, and I hope to see her later on."

He said the stage was well made. He did not wish to make it any more. He did not wish to make it any more. He did not wish to make it any more. He did not wish to make it any more. He did not wish to make it any more.

Good Sugar Beet Yield
Satisfactory Crop Grown On Northside of Lake Huron

Ledbridge Northside Irrigation District has been successful in growing a satisfactory crop of sugar beets on the north side of Lake Huron. The district has been successful in growing a satisfactory crop of sugar beets on the north side of Lake Huron.

Drink Less Tea
Five years ago Australia was the greatest tea-drinking country in the world. Australians then consumed 8 1/2 pounds a head, each year. But this has been reduced to 4 1/2 pounds a head, each year.

A Resumable Protest
Turkish strikers are protesting against a harsh cotton harvest. They are protesting against a harsh cotton harvest. They are protesting against a harsh cotton harvest.

A Distinguished Canadian Adds Much To Knowledge Of Irrigation Practices On This Continent

The recent death of Dr. Samuel Forster, has directed attention anew to his long and unique service to American agriculture, as well as to the United States Department of Agriculture. A Canadian by birth and education, he was one of the first to introduce irrigation practice here. He was an engineer of irrigation, and as such he was one of the first to introduce irrigation practice here.

He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here.

He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here.

He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here.

He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here. He was one of the first to introduce irrigation practice here.
